Klima Recruiting team,
Berlin

Dear Klima team,

for a quick introduction, I am a software engineer born and graduated in Colombia. I have been working mainly as a Java developer for around 9 years. During the last 6 years I have been fully involved with the development of microservices and RESTful APIs. I also have experience as a Python developer, and I am no stranger to making user interface changes. In general, I like to keep knowledge diversified to make better decisions about what fits requirements the best.

I came to Germany 1 year ago and I am looking forward to commit my energy into a challenging project. The ideal scenario is one where I can grow and share my knowledge into a meaningful mission. The environmental crisis has been a big topic in my life already for over 12 years. As an individual this is always a task that may seem overwhelming, but knowing about Klima made me think that joining a passionate team would be the perfect scenario to help a meaningful project sharing the same life goals.

In addition to the huge motivation I found in your business, my core skills match the majority of your requirements as you can see in my curriculum. Nevertheless I am sure I will have a lot of room to grow with the interesting technologies you use. And of course I would love to share my experience with your team. Please do not hesitate to reach me back with any questions or comments you may have.

Looking forward to getting to know the Klima team!
